Microsoft to Oracle Database Migration Assessment

Solutions based on .NET and Microsoft database technologies can be migrated to rich Oracle database stacks to exploit enterprise class functionality. These solutions enable .NET based applications to higher availability and reliability.

Oracle and its partners offer a range of tools, resources and proven best practices to reduce the left of effort and risk during the migration process while also optimizing the benefits of utilizing Oracle technology.

SageLogix will also advise you on the most economical licensing strategy to ensure and optimal return on your investment and lowest cost of ownership.

SageLogix and Oracle

SageLogix will provide at no cost, a one day database migration assessment to provide to you the information required to determine the feasibility, costs, risks and benefits of migrating to the Oracle technology platform.

The assessment considers the database as well as the applications involved in the overall efforts in migrating to an enterprise ready solution. The assessment includes the following:

- Initial consultative discovery discussion
- Analyze existing environments, data and applications
- Evaluate application complexity
- Review database design
- Document recommendations
- Present and discuss recommendations, level of effort and benefits

SageLogix Professional Services will ensure that the migration is a total success!

The Oracle and SageLogix team provides many resources to assist you in making decisions and migrating your databases and applications to Oracle. Please call or send email for a no cost assessment today.
